Hello Gwyn,

After reviewing the report you sent me for the repairs and upgrades needed for the Admirals Cove pool, I have decided, at this time, to not submit an estimate. From my conversation with you, I know there is a funding concern for this project if there is a total renovation done.

If only a partial renovation is done, there are ways in which you could improve your water quality without making expensive changes in the plumbing system. There are a number of pools in operation that have little problems in this respect and are also 'grandfathered in' like your pool.

The safety hazards would, of course, all have to be taken care of before the pool opens, but these modifications would allow you to have a pool open for the season without the major repairs and expenses suggested. If those major repairs are planned for in the near future, I would recommend not doing any partial repairs at this time and having the complete renovation scheduled before the pool is used again.

Thanks for your consideration.
